140	7590	05/26/2009		
LADAS & PARRY LLP 26 WEST 61ST STREET NEW YORK, NY 10023			EXAMINER	
			BEACH, THOMAS A	
ART UNIT		PAPER NUMBER		
3671				
MAIL DATE		DELIVERY MODE		
05/26/2009		PAPER		

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

<b>Office Action Summary</b>	<b>Application No.</b> 10/586,904	<b>Applicant(s)</b> WALLETT, GRANT ALAN DAVID
	<b>Examiner</b> THOMAS A. BEACH	<b>Art Unit</b> 3671

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(o).

#### Status

- 1) Responsive to communication(s) filed on 10 February 2009.  
 2a) This action is FINAL.      2b) This action is non-final.  
 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-8 and 13 is/are pending in the application.  
 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.  
 5) Claim(s) \_\_\_\_\_ is/are allowed.  
 6) Claim(s) 1,5-8 and 13 is/are rejected.  
 7) Claim(s) 2-4 is/are objected to.  
 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.  
 10) The drawing(s) filed on 30 January 2009 is/are: a) accepted or b) objected to by the Examiner.  
     Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
     Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).  
 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).  
 a) All    b) Some \* c) None of:  
 1. Certified copies of the priority documents have been received.  
 2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.  
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

- 1) Notice of References Cited (PTO-892)  
 2) Notice of Draftsperson's Patent Drawing Review (PTO-948)  
 3) Information Disclosure Statement(s) (PTO/SB/06)  
     Paper No(s)/Mail Date \_\_\_\_\_
- 4) Interview Summary (PTO-413)  
     Paper No(s)/Mail Date \_\_\_\_\_
- 5) Notice of Informal Patent Application  
 6) Other: \_\_\_\_\_

**DETAILED ACTION**

***Claim Objections***

1. Claim 1 is objected to because of the following informalities: on line 27, "tile" appears to be a typographical error. Appropriate correction is required.

***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1, 5-8, and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Soczka 6,219,946 in view of Salmon et al 4,280,600. Soczka bucket (38) for a mechanical shovel (10), the bucket having a hollow body provided with an inlet for receiving material into its interior and an outlet (82) for discharging material therefrom, the bucket having, secured to the body, a door (86) which is movable relative to the body between a closed condition in which it closes the outlet of the bucket so that material cannot be discharged therefrom, and an open condition in which it permits discharge under gravity of material from the bucket, the bucket also including at least one buffering device (98, abstract) operatively connected between the body and the door of the bucket for buffering movement of the door relative to the body, the bucket being characterized in that each buffering device is in the form of a telescopically

extensible and retractable piston-and-cylinder assembly (98) for containing a working liquid including a cylinder (38) and a piston (36) longitudinally slidably received in the cylinder, the piston having a piston rod (138) projecting longitudinally from an end of the cylinder and a piston head (122) located in the cylinder and slidably sealingly engaging the wall of the cylinder, two compartments (130, 126) containing working fluid being defined respectively between the piston head and the respective opposite ends of the cylinder, the piston-and- cylinder assembly being operatively connected between the body and the door such that opening of the door causes the piston-and-cylinder assembly to retract and closing of the door causes it to extend, the piston-and-cylinder assembly also including a fluid flow control assembly (166) via which the two compartments are in fluid flow communication with each other, the fluid flow control assembly being constructed and arranged to cause fluid flow through the fluid flow assembly from the compartment remote from the end of the cylinder from which the piston rod projects to the compartment adjacent the end of the cylinder from which the piston rod projects during opening of the door (figs 2-5), but does not show the piston having a piston rod (138) projecting longitudinally from an only one end of the cylinder and to cause throttled fluid flow through the fluid flow assembly from the compartment adjacent the end of the piston from which the piston rod projects to the compartment remote from the end of the cylinder from which the piston rod projects during closing of the door, which throttled flow is throttled relative to the fluid flow during opening of the door, such that movement of the door towards its closed condition is buffered relative to movement of the door towards its open condition.

However, Salmon shows a similar buffering device (10) capable of being connected to the door of a bucket (col. 2, line 62), where the buffering device includes a piston 12 having a piston rod (16) projecting longitudinally from an only one end of the cylinder 14 (see figure) where fluid flow through the fluid flow assembly (32) in a restricted way (figure, see passageways 40/42/28) where the total volume of the two compartments 18/22 decreases when the door moves towards its open condition and increases when it moves towards its closed condition since in compartment 22 the volume of this compartment increase as the end 30 is moved upwardly. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Soczka, as taught by Salmon, to include a controlled piston rod assembly in order to dampening the door of bucket for the expected result of improved adjustable control of the door during opening and closing operations, thus preventing damage to the bucket.

As concern claim 5, the combination (Soczka) shows the door is hingedly (90) secured to the bucket, such that it hinges between its closed condition and its open condition, with the cylinder and the projecting end of the piston rod respectively being provided with securing formations by means of which the piston-and-cylinder assembly is hingedly secured in position between the body and the door.

As concern claim 6, the combination (Soczka) shows the fluid flow control assembly is located outside the interior of the cylinder of the piston-and-cylinder assembly (fig 2)

As concern claim 7, the combination shows the fluid flow control assembly is located in the interior of the cylinder of the piston-and-cylinder assembly (Soczka, fig 3 & Salmon, fig).

As concern claim 8, the Examiner takes office notice that the use of a releasable latch with for retaining the door in its closed condition is notoriously well known in the art.

***Allowable Subject Matter***

4. Claims 2-4, and are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

***Response to Arguments***

5. Applicant's arguments with respect to the claims have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thomas A. Beach whose telephone number is 571.272.6988. The examiner can normally be reached on Monday-Friday, 8:00am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Thomas Will can be reached on 571.272.6998. The fax phone number for the organization where this application or proceeding is assigned is 571.273.8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
